Prepared by:

Paul Spencer-MacGregor

Report Highlights: Austrian wheat yields were hurt by hot dry weather in May and June and are 10 percent to 15 percent lower than last year. Quality is good and very little wheat is being marketed as 'feed grade'. A PS&D is provided for wheat in this report. Durum wheat quality is also very good and area was about five percent higher than last year at about 12,500 ha and total harvest of 40,000 MT (durum is not part of the wheat PS&D).

The corn crop in Austria is good and the expected crop size is 1.555 MMT with nearly all of it being for domestic consumption. Recent flooding has done little to the mature crop and only reduced harvestable area by about 1,500 ha. The barley harvest was about 765,000 MT. No PS&D is provided for corn or barley in this report.

Includes PSD changes: Yes
Includes Trade Matrix: No
